DESCRIPTION

As stewards of the land, farmers have a long history of adapting to feed, preserve and protect the planet. Inspired by their resilience, we're hosting a thought-provoking discussion to rethink our industry's future and quest to feed our rapidly growing population through sustainable technologies, tools and practices.

This thought-provoking, panel discussion of industry experts will consider the concept of agriculture as a circular economy – to produce food in a way that benefits the environment and creates ecosystem assets like sequestered carbon and improved water quality – and what farmers need to engage in this transformation.

SPEAKERS

Moderator: **Amanda Little**
